Content:

- 1- **General**.....
- 2- **Definition of ISPS code levels**....
- 3- **List of security levels in INDIAN ports**.....

3. LIST OF SECURITY LEVELS IN INDIAN PORTS.

Kindly note to attached listing of security levels for **Indian ports**. Since security levels can change without notification to the Maritime Administrator, always check with local port agents regarding the current security level for any Indian port.

1. GENERAL

The International Ship and Port Facility Security Code (ISPS Code) is a comprehensive set of measures to enhance the security of ships and port facilities, developed in response to the perceived threats to ships and port facilities in the wake of the 9/11 attacks in the United States. The ISPS Code is implemented through chapter XI-2 Special measures to enhance maritime security in the International Convention for the Safety of Life at Sea (SOLAS 1974).

2. DEFINITION OF ISPS CODE LEVELS

2-1) **Security Level 1**, normal; the level at which ships and port facilities normally operate.

2-2) **Security Level 2**, heightened; the level applying for as long as there is a heightened risk of a security incident.

2-3) **Security Level 3**, exceptional; the level applying for the period of time when there is a probable or imminent risk of a security incident.
